

ISMaccess

ISMaccess enables organizations to manage access to sensitive areas through visual identification and artificial intelligence. Our patent-pending vision analytics products are designed to be scalable, fast, and accurate while maintaining the highest levels of security, privacy, and convenience.

THE CHALLENGES OF ENTRY SYSTEMS

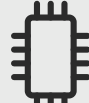

Office buildings, venues, and other properties grant access to thousands of employees and visitors each year, typically through a workflow process that is not fully secure. **People share access control key cards or codes or enter with counterfeit IDs**, causing a potential security vulnerability.

BENEFITS OF ISMaccess

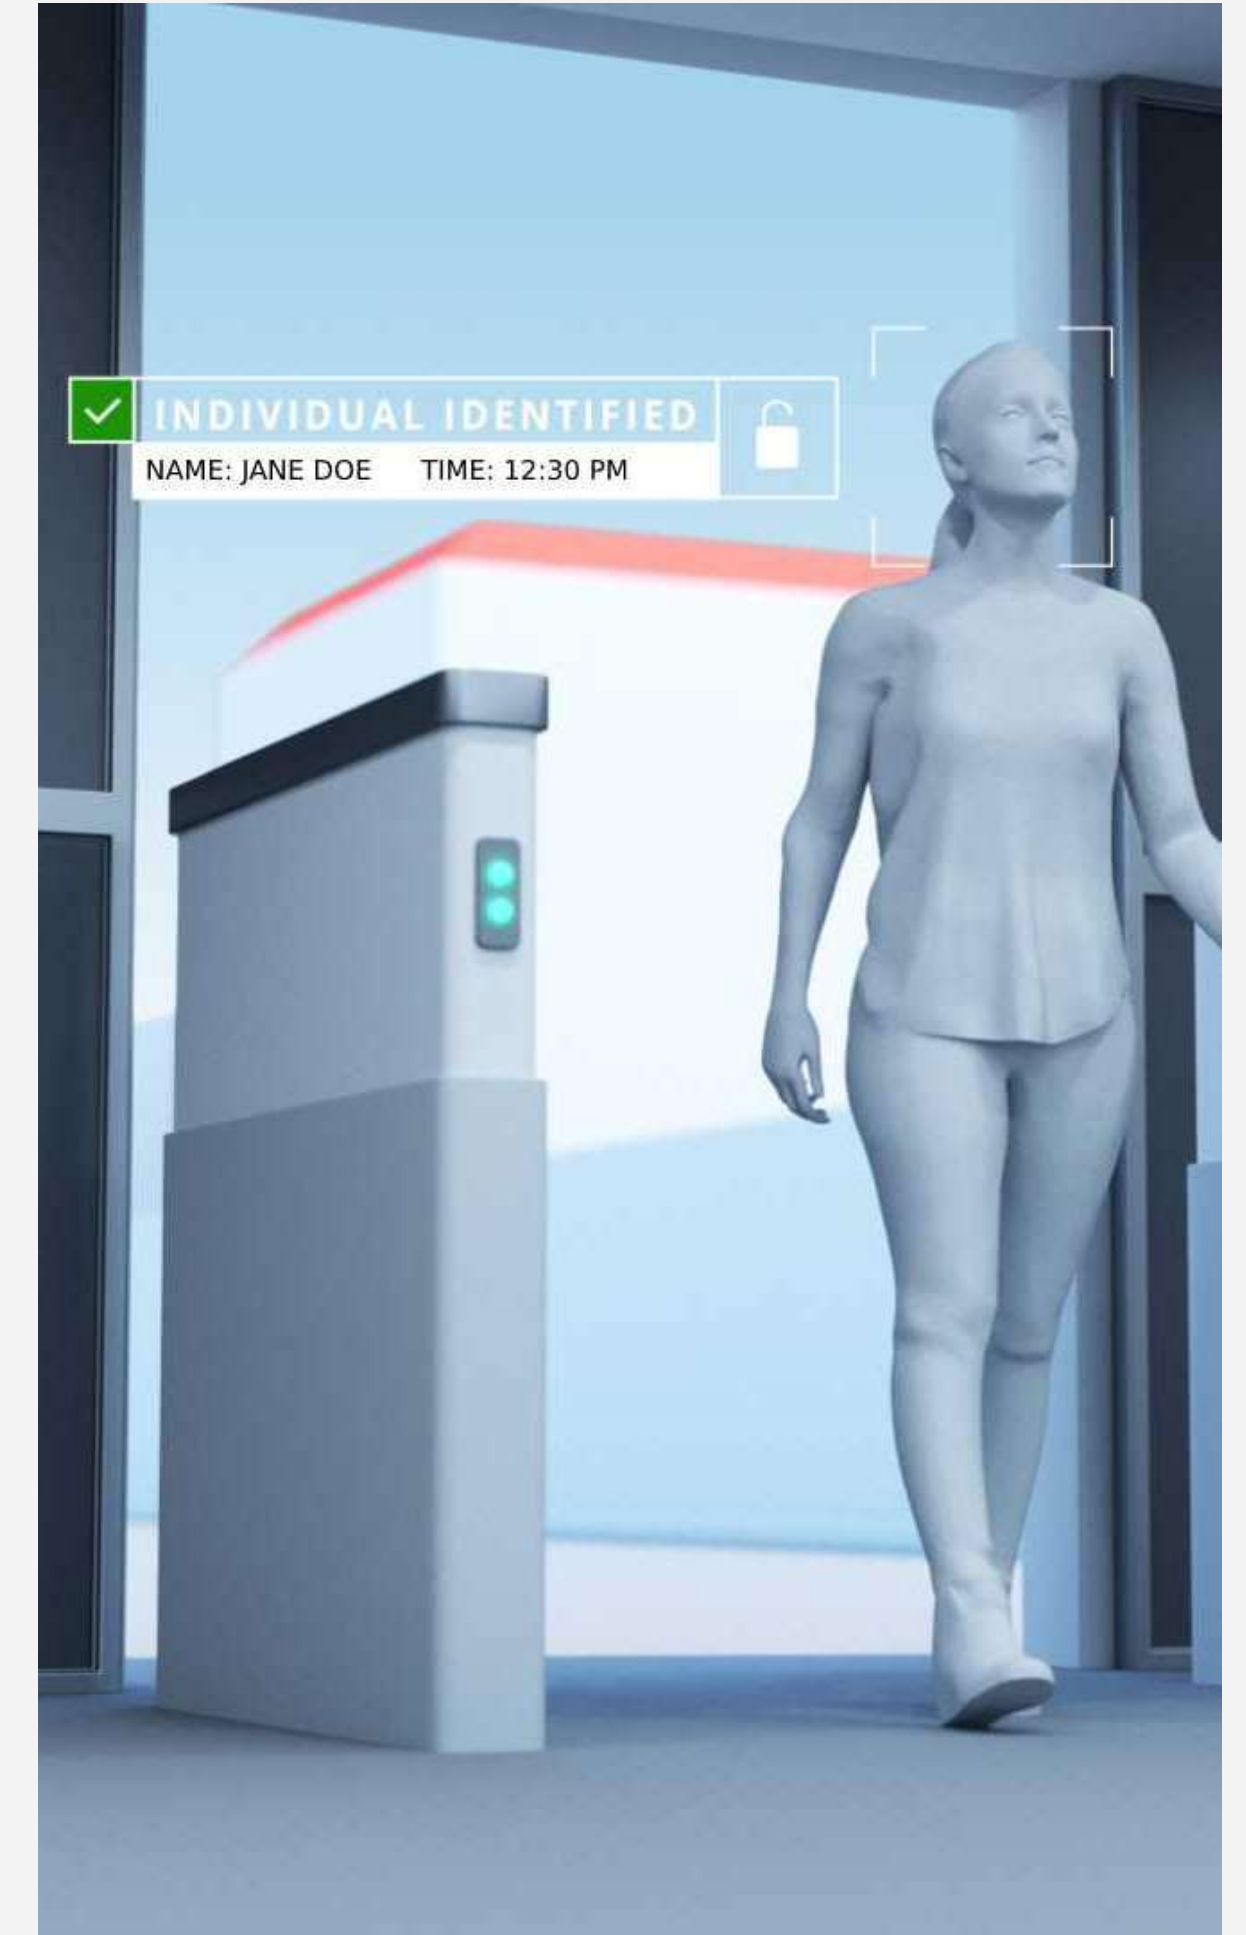

ISMaccess is a secure access solution based on vision analytics of an individual's facial likeness. **The system allows authorized people entry** with utmost ease and speed while **keeping out unauthorized staff or potentially dangerous people.**

 Secure, scalable registration of entrants

 Real-time, computer vision decision making

 Integrated with existing access hardware

 Mobile alerts to security teams

USE CASES

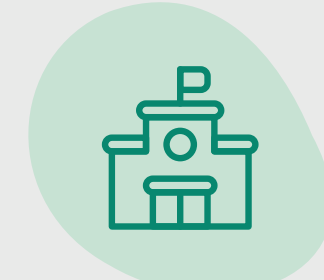

VIP Areas

Arenas

Government Buildings

Retail

Hotels & Casinos

Corporate & R&D Areas
